

## Proceedings of the London Mathematical Society Volume 29, No. 2

Filesize: 9.65 MB

### ***Reviews***

*This published publication is excellent. This really is for all who statte there had not been a well worth studying. I am very happy to inform you that this is the very best ebook i have read through within my very own daily life and could be he greatest pdf for possibly.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 Excerpt: . 5, serve to explain the polarizing efficacy of a grating, as employed originally by Hertz. As a numerical example, let us suppose that the wave-length is ten times the interval  $a + b$ . Then, even if one-tenth only of the area of the grating be occupied by the metal strips, the coefficients of reflection and transmission are, for electrical vibrations parallel to the lengths,  $R=879$ ,  $T=121$ . The same numbers in reverse order give the coefficients of reflection and transmission for electrical vibrations transverse to the length, when the apertures occupy only one-tenth of the area; viz.,  $R=121$ ,  $T=879$ . The coefficient of reflection in the one case, and of transmission in the other, increases rapidly with the wave-length. In the immediate neighbourhood of the grating the lines  $y = \text{const}$ , coincide with the curves  $f = \text{const}$ , of Fig. 1. These give the directions of the electric oscillation; but it must be remembered that the portions of the vertical line of symmetry which represented the metal strips in the electrostatic problem of 1 now correspond to apertures, and vice versa. The mathematical conditions to which the magnetic force  $y$  is subject in the problem of this section are exactly those which apply to the velocity-potential in the case of sound-waves incident directly on a grating of the kind considered. It appears that a series of narrow slits, with relatively broad opaque intervals, may transmit a very large proportion of the original sound, provided the...
